# The Top 33 Dividend Stocks To Own In A Volatile Market...

Is the market heading higher or lower?

The major averages were up in January, down in February, and it's anyone's guess where the market goes from here!

In markets like these, smart investors are buying and holding dividend paying stocks.

And the really smart investors?

Their buying and holding the highest quality stocks in all 11 sectors of the economy.

If you're going to join the really smart investors and own high quality dividend stocks then you should be asking this question above all others...

## **Will my dividend be safe and continue to be paid?**

Now, there are a lot of factors that go into researching that question. And only those companies successfully answering all these questions make the grade on our list.

Here are just a few of the factors that go into screening the following list:

- Can the company afford to pay the dividend?
- How will the business perform in a recession?
- How do they compare against industry

peers?

- Are there any red flags out there that may hit company earnings?
- How much debt do they have?
- Will rising interest rates impact their dividend payments?
- Is there any upside for the company stock?
- Has the company paid a dividend long-term?
- Has the company increased the dividend annually?

These are just a handful of very important questions that every investor should be looking at when considering investing in dividend paying stocks.

The list you'll find below has been recently vetted and updated to give you access to 3 great options in each of the major investment sectors.

Why break them down by sector?

Simple. **Diversification.**

Sector diversification can add a secondary layer of total portfolio protection for investors.

If you were to buy 1 of each of these companies in each sector, you'd be better off than just buying the highest 11 paying stocks on the list.

Why?

# The Top 33 Dividend Stocks To Own In A Volatile Market...

Because many of those higher paying stocks are in the same industries. And if a sector like real estate starts to trend lower for example... then most in the real estate sector will trend lower as well!

That's just an example, and there are always exceptions to the rule. But with history on our side, typically this is how stocks trade.

If you wanted to really diversify your portfolio, you could buy all 33 stocks on the list... giving you multiple holdings in each of the 11 sectors.

**That's real diversification.**

Plus, you'll be collecting a healthy dividend while you wait for a new bull market to be established and the stocks to gain in value.

Here's an interesting statistic about this list:

**If you purchased equal dollar amounts of all 33 stocks on the list, you'd get a super-strong yield of 3.61%! At the end of February 2023 for example, the entire average S&P 500 yield was just 1.69%.**

You'd get more than double the average market

in dividend yield... and be holding a high quality set of stocks with deep, deep diversification and dividend safety.

If you are impressed with the following list, you're going to want to head over and subscribe to the DIVIDEND TREE newsletter.

Once you're inside and a member, you'll get incredible analysis and in-depth coverage of exclusive dividend paying stock portfolios. Plus members get a number of free retirement planning tools and special reports.

Investments recommended in this publication should only be made after consulting with your financial advisor.

Examples in these materials are not to be interpreted as a promise or guarantee of earnings or profits. Earning and profit potential is entirely dependent on the person using our product, ideas and techniques. This is NOT a “get rich scheme.”

Your level of success in attaining the results claimed in our materials depends on the time you devote to the program, ideas and techniques mentioned, your finances, knowledge, and various skills. Since these factors differ according to individuals, we cannot guarantee your success or income level. Nor are we responsible for any of your actions.

Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown; in fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk of actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results and all which can adversely affect trading results.
